Product-minded engineer with 5 years of experience. I do my best work close to the people who use the software: I sit with operators to find the real problem, cut scope to what moves it, then own the result from database schema to production support. Recently I've been the sole engineer on internal operating systems for a real estate group and an education institute, and the main author of the AI copilots behind two SaaS products.

SKILLS

Product	Discovery with non-technical stakeholders, writing and scoping specs, phased rollouts, replacing spreadsheet and chat workflows, production support
AI	AI agents, RAG, agent memory, context engineering, MCP servers, OpenAI / Gemini / Mistral APIs, ChromaDB, LoRA fine-tuning
Engineering	TypeScript, Python, Go, Rust (Tauri) · Next.js 16, React 19, React Native · Node.js, Bun, Express, FastAPI · BullMQ, WebSockets
Data & infra	PostgreSQL, Drizzle, Redis, MySQL · Docker, GitHub Actions, Railway, Vercel, AWS, Cloudflare R2 · Stripe, Resend, better-auth

EXPERIENCE

Senior Full Stack Engineer · Provision Capital (Texas, USA · remote)

Apr 2024 – Present

Product engineer for a real estate investment firm and the businesses it runs. I scope problems with the operators, then design, build, ship and support the software.

RRH OS · operating system for RentReady Homes · sole engineer

- Turned a written Phase 0 specification into a working platform: Next.js 16 staff console, Postgres schema with region-based access and an editable role grid, and an Express + BullMQ processor.
- Modeled the real ownership structure (properties, LLCs, parent groups, funds, third-party owners) and made every change an append-only, dated record so operations can audit who changed what and when.

Qalam Institute · Qalam Hub and Qalam Facility · sole author

- Built a family of internal apps that share one login, one Postgres database with per-app schemas, and a shared notification service, so each new team app starts with auth and email already solved.
- Qalam Hub gives nine teams one place for tickets and tasks, each linked to the program or event it serves, so a request is visible to the whole team instead of only the person who filed it.
- Qalam Facility moved tickets, room bookings, spaces and inventory out of ClickUp, Slack, WhatsApp and email into one searchable tool.

Other products · Muslim Spaces, NasIQ, Air Allergen, PB Inventory, Morcel, Habbah

- Muslim Spaces: built the web app and the App Store iOS app from scratch, with Stripe payments and donations across 500+ community organizations.
- NasIQ: AI IT support on Gemini and OpenAI with instant ticket triage and Slack + Jira escalation to a human with full context.
- Air Allergen: lab information system (LIMS) plus the booking site with Stripe and Google Calendar self-scheduling. PB Inventory: replaced a shared spreadsheet with a multi-location count, order, receive and reconcile flow.
- Pushed back in product discussions when a proposed feature didn't match what users were asking for, and fixed live onboarding and payment issues before they cost accounts.

Software Engineer · REDQ Technologies Ltd. (Dhaka)

Apr 2024 – Present

TypeScript, Next.js 16, Python, FastAPI, ChromaDB, Redis, BullMQ, PostgreSQL, OpenAI Agents SDK

- Main author of the TrueBeep AI Engine: a copilot agent with RAG over campaign results and an auto-reply agent for multi-channel inboxes.
- Main author of PROA Brain for a multi-tenant ERP: copilot with short-term (Redis) and long-term (ChromaDB) memory, document search and Mistral OCR.
- Integrated 7+ platforms (Meta, Instagram, WhatsApp, TikTok, Canva, Unsplash) and built Socket.IO collaboration that cut perceived latency by about 40%.

Frontend Developer · Edison Communication Ltd. (Dhaka)

Jun 2023 – Apr 2024

- Built WebManza, a drag-and-drop store builder. Moved storefronts to SSR for SEO and cut redundant network calls by about 40% with RTK Query.

JavaScript Developer · **Delivery Hobe** (Dhaka) Oct 2021 – May 2023

- Architected the AdsHobe B2B ads platform frontend from scratch; built the DeliveryHobe storefront and a React Native rider app.

Founder · **BUTEX NoteBot** Sep 2018 – Present

- Started a Messenger bot to share lecture notes with classmates and grew it into a study platform: web app, CMS and a Go analytics service.
- Shipped NoteBot MCP (ai.butexnotebot.com) so students can ask Claude or ChatGPT about official notices, with circuit breakers and cache fallback when the university site is down.

OPEN SOURCE

Turbo Reader · Desktop RSS reader in Rust + React on Tauri 2; installer under 5 MB.

Porter · Cross-platform port monitor that shows and kills whatever is holding a port.

Shapeshifting Software · Reference design for apps that adapt from natural-language intent within guardrails.

md-viewer-pwa, **Fluent Menu**, **bin-21**, **lo-cli**, **docset-gen** · npm: ts-stats, bang-utils, simple-messenger-blocks

EDUCATION

M.S. Computer Science, United International University · CGPA 3.97 2025

B.S. Industrial Engineering, Bangladesh University of Textiles · CGPA 3.75 2023
